

Some of the types of businesses currently benefiting from using the KEC™

- Manufacturing Plants
- Machine Shops
- Car Washes
- Print Shops
- Water Plants
- Grocery/Convenience Stores
- Agricultural Facilities
- Gyms and Health Clubs
- Laundromats and Dry Cleaners
- Schools, Churches, Libraries
- Food Processing Plants
- Restaurants
- Laboratories
- Medical Facilities
- Warehouses
- Golf Courses

The U.S. Department of Energy recommends the use of capacitors to decrease the amount of non-productive power as a means to reduce your utility bill. Capacitors, similar to the KVAR Energy Controller, are used by utility companies and major industrial companies to manage power and reduce expenses. KVAR® has introduced a smaller, less intrusive, safe and cost-effective solution for your business.

Compliant to the 2008 National Electrical Code (NEC) Article 460

The installation of the KEC follows the guidelines of the National Electrical Code, Article 460.

Go Green with the KVAR® Energy Controller

Save Money & Make Your Business Energy Efficient

Reduce your electric bill and extend the life of your business' electrical equipment & motors.

How the KVAR® Energy Controller (KECT™) Works

Appliances and equipment that have motors such as air conditioners, pumps, chillers, heavy machinery... inherently waste energy. The KECT™ saves energy by recycling and storing energy that would otherwise be wasted, reducing the amount of power drawn from your utility company and lowering your kilowatt usage.

The energy efficient KECT™ fine tunes your business' electrical system to reduce nonproductive and wasted electricity giving you cost effective energy while saving you money.

Save up to 20% on Your Electric Bill.

Improve the operation of your existing equipment for increased energy efficiency.

Help Your Business Go Green

The most effective solution for energy efficiency & savings if your business has any of the following:

- ✓ **Electrical Motors**
- ✓ **Air Conditioning Units**
- ✓ **Chillers**
- ✓ **Refrigeration Equipment**
- ✓ **Industrial Equipment**

Power Surge Reduction

The KECT™ provides the first layer of surge protection for your business' electrical devices and equipment, protecting against spikes in current that may cause costly damage.

How Do You Achieve Savings?

As the demand for power rises throughout your business, there is nonproductive current (heat) that strains the property's equipment and wiring. This heat is wasted energy that you are paying for. The KECT™ optimizes the power that comes into your building allowing your appliances and equipment motors to operate more efficiently. It reduces heat (wasted electricity) which in turn lowers your electric bill, reduces the chance of fires, and increases the life of your appliances and motorized equipment.

Custom Sizing For Your Business' Needs

In the past, businesses installed capacitors at their mains to control energy efficiency. This method is known as Power Factor corrections, but it benefited only power companies by resulting in lower current demands. It didn't reduce the business' energy costs. Now there is a better way. The KECT™ uses Power Factor Optimization (PWO), which is a proven, one-of-a-kind, patented technology for providing maximum efficiency. Energy and equipment costs are substantially reduced by individually evaluating or "sizing" each motor. Customized sizing provides your business with accurate forecasts of energy savings. The KECT™ typically results in reducing your business' electricity costs by 8-20% while increasing energy efficiency, a benefit for both your business' bottom line and for the environment.

How Does Your Business Benefit?

- Saves Money on Electric Bill
- Extends the Life of Motorized Equipment
- Reduces Equipment Repairs
- Reduces Operating Costs
- Increases Energy Efficiency
- Protects the Environment

MAKE SURE YOUR BUSINESS' APPLIANCES & MOTORIZED EQUIPMENT ARE RUNNING EFFICIENTLY
