and the  
Environment

Go Green with the  
KVAR® Energy Controller

Lower Your Home's  
Electric Bill  
Up to  
25%  
It's Easy  
& Affordable!

*The most effective solution for  
energy efficiency & savings if your home  
has two or more of the following:*

- ✓ Air Conditioner
- ✓ Refrigerator
- ✓ Electric Heater
- ✓ Pool/Hot Tub Equipment
- ✓ Dishwasher
- ✓ Washer & Dryer

# Save Money & Make Your Home Energy Efficient

Reduce your electric bill and extend the life of your household's electrical equipment & motors.

## How the KVAR® Energy Controller (KEC™) Works

Household appliances and equipment that have motors such as air conditioners, dishwashers, washers & dryers, pool equipment, refrigerators... inherently waste energy. The KEC™ saves energy by recycling and storing energy that would otherwise be wasted, reducing the amount of power drawn from your utility company and lowering your kilowatt usage.

The energy efficient KEC™ fine tunes your home's electrical system to reduce nonproductive and wasted electricity giving you cost effective energy while saving you money.

Save up to 25% on Your Electric Bill.

MAKE SURE YOUR HOME'S APPLIANCES AND MOTORIZED EQUIPMENT ARE RUNNING EFFICIENTLY.

Improve the operation of your existing equipment for increased energy efficiency.

## Help Your Home Go Green

Electricity is the biggest source of power usage for U.S. homes. For every kilowatt hour used, 2.2 kilowatts are lost as the energy is generated and sent over transmission lines. So even small changes can scale up to big reductions in carbon emissions. With a KEC™ you can help make a positive change for the environment by reducing energy consumption in your home and lowering the demand for power that is a major cause of global warming.

## Surge Protection

The KEC™ provides the first layer of surge protection for your home's electrical devices and equipment, protecting against spikes in current that may cause costly damage.

## How Do You Achieve Savings?

As the demand for power rises throughout your home, there is nonproductive current (heat) that strains your home's appliances and wiring. This heat is wasted energy that you are paying for. The KEC™ optimizes the power that comes into your home allowing your appliances and equipment motors to operate more efficiently. It reduces heat (wasted electricity) which in turn lowers your electric bill, reduces the chance of fires, and increases the life of your appliances and motorized equipment.
